

Introducing the

SPECTROLINE[®]

OPK-340 Industrial Leak Detection Kit

Left undetected, industrial system fluid leaks can lead to expensive equipment breakdown, disrupted production, accidents and environmental problems. That's why today, more than ever, you need an effective, economical and efficient method of finding leaks in oil, hydraulic, water and water/glycol-based systems.

Our **OPK-340 Industrial Leak Detection Kit** fits the bill perfectly. This new kit features the super-high intensity **OPTIMAX™ 3000** blue light LED leak detection flashlight with power comparable to 150W lamps and an inspection range up to 20 feet (6.1 m). The OPK-340 kit includes our patented **OIL-GLO™ 44** fluorescent oil dye, which is completely compatible with all synthetic or petroleum-based fluids. It also features our **WD-802** fluorescent water dye, which is ideal for finding leaks in all types of water-based circulating systems. Both dyes glow brightly and allow inspection of an entire system under virtually all operating conditions, ensuring that you find even the smallest, most elusive leaks quickly and easily!

The **OPK-340 Industrial Leak Detection Kit** — the perfect tool for pinpointing the exact source of all fluid leaks in hydraulic equipment, compressors, engines, gearboxes, fuel and water-based systems!

Kit includes:

- OPX-3000 OPTIMAX™ 3000 super-high intensity, cordless, rechargeable blue light LED leak detection flashlight
- 16 oz (473 ml) twin-neck bottle of patented OIL-GLO™ 44 concentrated oil dye
- 16 oz (473 ml) twin-neck bottle of WD-802 concentrated water dye
- 8 oz (237 ml) spray bottle GLO-AWAY™ dye cleaner
- Smart AC and DC chargers
- Fluorescence-enhancing glasses
- Rugged carrying case

Also available: OPK-341 Industrial Kit. Similar to kit above, but features an additional 16 oz (473 ml) twin-neck bottle of OIL-GLO™ 44 concentrated oil dye in place of WD-802 water dye.
