

Introducing the

SPECTROLINE®

VVS-400 Voter Verification System

Prevent Voter Fraud! Keep The Electoral Process Honest!

- ✓ **Invisible and indelible ink!**
- ✓ **Fluoresces a brilliant blue under Spectroline® UV lamp!**
- ✓ **Does not easily wear off or disappear — even after multiple hand washings!**
- ✓ **Fast, easy, safe, economical and foolproof!**

VVS-400 System includes:

Spectroline® UV-4B Battery-Operated Long Wave Ultraviolet Lamp

- Compact, lightweight, and portable! Weighs only 7 oz (198 g).
- Powered by four 1.5V standard AA size batteries (not included). Provides 4 to 6 hours of use.
- Features anti-slip, plastic screw for trouble-free tube changing, sliding cover for easy battery replacement and a handy nylon carrying strap.

Spectroline® SP-20D Fluorescent Ink

- Ready to use — no mixing required.
- Jar contains invisible and indelible fluorescent ink-soaked foam.
- Glows a bright blue color when exposed to UV light.
- Does not easily wash off. Remains effective for more than 24 hours!
- Over 2,000 applications per jar!

Easy Two-Step Process:

After the vote is cast, before exiting the voting booth, the voter inserts a finger approximately one inch through the hole in the SP-20D fluorescent ink-soaked foam.

To stop a voter from returning and attempting to fraudulently cast another vote, simply perform a routine check of the voter's finger under the Spectroline UV-4B lamp. If that person has already voted, their "inked" finger will be revealed by a telltale bright blue glow!
